PROJECTS

A.I Phishing Scam Detection System | Python , MachineLearning , and Google API

Mar 2025

- Developed an AI-powered system to detect phishing scams by analyzing and classifying malicious URLs.
- Integrated the Google Safe Browsing API to enhance threat detection accuracy.
- Implemented machine learning algorithms to improve phishing detection and minimize false positives.
- Designed a user-friendly interface for seamless URL scanning and real-time feedback.

AI Plant Disease Detection System | HTML, CSS, and JavaScript

Sep 2024

- Developed an AI-powered system for detecting plant diseases using deep learning and computer vision.
- Trained a convolutional neural network (CNN) model on a dataset of plant leaf images to identify diseases with high accuracy.
- Integrated real-time image processing using OpenCV for instant disease detection.
- Designed a user-friendly interface for farmers and agricultural experts to upload images and receive diagnostic results.
